ExtremeSwitching™ X465 Series

Premium Stackable Edge/Aggregation Switch Platform

Product Overview

The ExtremeSwitching X465 Series is a premium stackable switch family providing high-performance, convergence-ready, resilient and secure Gigabit and multi-Gigabit Ethernet connectivity. Powered by ExtremeXOS, the X465 Series offers sophisticated routing and switching, high-speed stacking, modular uplink options, advanced PoE, and comprehensive security. This makes the X465 Series an ideal choice for high-end wiring closet and network edge deployments.

Future-Proof Switches for Flexible Use

The X465 Series includes both 24- and 48-port 1 Gigabit models, multi-rate 1, 2.5 and 5 Gigabit models, as well as 24-port 1 and 10 Gigabit fiber models. The family also offers 30W, 60W and 90W PoE models making the X465 an ideal wired back-end for Wave 2/Wi-Fi 6 wireless APs or to power next-gen Ethernet edge devices, such as point-of-sale terminals, cameras or LED lighting displays. The X465 also supports modular uplinks at 10G, 25G and 40G for flexible linkage to other switches or devices over a range of media.

Built to Suit Your Business Needs

Integrated Application Hosting

Select X465 Series models support Extreme's Integrated Application Hosting which leverages the switch's hardware and software design to run onboard applications without impacting switch performance. X465 models with a quad-core processor can run a Guest VM directly on the switch in support third-party or customized applications—to meet specific business or operational needs. This can provide additional network insight or enable new network applications without need for a separate hardware device. (NOTE: Requires a Core License)

MACsec Link Encryption

The X465 Series supports IEEE 802.1AE MACsec on its 10/100/1000 access ports, as well as on its modular uplink ports. MACsec is a hop-by-hop security capability which encrypts/decrypts packets between connected switches or devices. As a link-only encryption, the switches can still apply services to the packet, such as policy or QoS, without compromising the security of packets across the link. With support for both 128-bit and 256-bit Advanced Encryption Standard (AES) support, the X465 provides the most secure link encryption.

Extended Edge Switching

All X465 models support Extended Edge Switching, an innovative solution that simplifies the deployment and operation of edge switches. As the controlling bridge of an Extended Edge solution, the X465 can be combined with Extreme's V300 and V400 Series access devices to create a single logical switch architecture. The result is a simplified operational model that reduces costs.

Fabric Attach

Fabric Attach on the X465 can be used to automate the connection to Extreme's campus-based Fabric Connect solution. Fabric Attach not only provides zero-touch edge provisioning, it also allows the X465 to take advantage of the virtualized services and inherent security capabilities of the Extreme Fabric Connect infrastructure.

VIM Options for Flexible Uplinks

The X465 supports Versatile Interface Modules (VIMs) for its uplink ports - in addition to its two dedicated stacking ports. Each X465 model has a single VIM slot that can be optionally used for uplinks. VIM options include both 2 and 4-port modules that support 10Gb, 25Gb and 40Gb data rates. VIM modules with LRM and/or MACsec support are also available.

Role-Based Policy

The X465 supports role-based policies that can be centrally administered through the ExtremeControl policy manager. This policy framework empowers network administrators to define distinct roles or profiles to represent specific operational groups that may exist in an enterprise. Each defined role can then be granted individualized access to specific network services or applications - and these access privileges remain associated with users as they move across both wired and wireless network access points.

Management

The X465 can be managed in a variety of ways. Simple on-box management functions are delivered by a web-based GUI, and a generic CLI is available for manual configuration.

ExtremeCloud™ IQ along with Extreme Management Center (XMC) also provide a comprehensive unified management capability with a consolidated view of users, devices and applications for wired and wireless networks.

Zero-touch provisioning lets one quickly bring new X465 switches online and a granular view of devices, ports and users enables efficient inventory and network topology management.

Location LED

A location LED on the front panel of the X465 chassis can be used to quickly identify a specific X465 switch deployed in wiring closet or a stack.
